MARIA ANGELICA VINESYTHA CHANDRAWAN

Makassar, South Sulawesi | mariangelicaa1412@gmail.com | linkedin.com/in/maria-angelica1214/ | maria-angelica-portfolio.vercel.app

SUMMARY

Informatics student specializing in Artificial Intelligence and Machine Learning, with hands-on experience in end-to-end AI deployment, data-driven application pipelines, and peer-reviewed technical publications. Developed scalable solutions covering Large Language Models (LLM), computer vision, and big data architectures. Strong focus on model optimization, data acquisition pipelines, and continuous knowledge systems using Human-in-the-Loop workflows.

SKILLS

- ML/Data: Python, Machine Learning, RAG, LLM Integration (Gemini API, PaLM), Embeddings & Vector Retrieval, Human-in-the-Loop (HITL), NLP, Computer Vision (YOLOv4, OCR), Roboflow, CoreML
- Engineering & Tools: Swift, SwiftUI, JavaScript, ReactJS, HTML/CSS, REST API, SQL (MySQL), Git/GitHub, Figma, Flask, Express.js
- Data Science & Big Data: Content-Based Filtering, Collaborative Filtering, Structured Storage
- Other: Project Management, Technical Writing, Team Collaboration, Proposal & Financial Planning

PROJECT

Internal Document Q&A System (RAG + HITL) | AI/ML Developer Thesis — 2025

Tools: Python, RAG, LLM, embeddings, vector retrieval, HITL

- Developing an automated question-answering pipeline leveraging Retrieval-Augmented Generation (RAG) to extract information from internal unstructured corporate documents.
- Implementing text embeddings and vector retrieval databases to ground LLM responses, successfully reducing model hallucination.
- Designed a Human-in-the-Loop (HITL) workflow that escalates out-of-scope questions to administrators, ensuring data integrity and continuous dataset improvement.

Big Data Online Course Recommender System | Data & ML Engineer — 2025

Tools: Puppeteer, Selenium, API Integration, Content-Based & Collaborative Filtering, Python

- Architected a scalable recommendation pipeline handling over 117,000+ course data entries scraped from Coursera, Udemy, and Alison using Puppeteer and Selenium.
- Engineered the machine learning pipeline by implementing and hybridizing Content-Based Filtering and Collaborative Filtering algorithms to enhance suggestion accuracy based on user preference vectors.
- Designed structured storage schemas for historical user interaction data to optimize data acquisition latency and model retraining cycles.

Scheddy (Caddie Scheduling App) | Project Manager & Frontend Developer — 2025

Tools: Swift, SwiftUI, REST API, PostgreSQL, Google Cloud Run, Jira, Miro

- Led a cross-functional team as Project Manager to design and deploy an iPadOS application that automates daily operational scheduling for 180 caddies at Ciputra Golf, successfully replacing a legacy manual workflow.
- Formulated project timelines, distributed development tasks, and spearheaded daily standup meetings to ensure agile alignment and on-time milestone delivery.
- Developed highly responsive user interfaces using SwiftUI and engineered efficient data-fetching routines to integrate backend REST API endpoints.
- Implemented scheduling logic that automatically generates rosters based on the previous day's caddie session records while granting administrators full flexibility to adjust shift group allocations.

PetGuardian AI Pet-Care PWA | Lead Developer & AI Engineer — 2024

Tools: Gemini API, PaLM, Roboflow, PWA, ReactJS, Tailwind CSS, Flask

- Built and deployed a lightweight Progressive Web App (PWA) designed to enhance pet welfare by providing pet owners with multi-device accessible, AI-powered care solutions.
- Integrated Gemini API and PaLM models via customized prompt engineering and computer vision pipelines to deliver three core features: automated breed identification, skin disease detection (up to 94% accuracy), and personalized grooming recommendations.
- Developed the end-to-end web application using ReactJS and Flask, implementing user-centered design principles to ensure seamless accessibility and responsiveness.
- Evaluated model performance using rigorous metrics (Precision, Recall, F1-Score) and validated features through user acceptance testing (UAT) with 45 active users.

EDUCATION

Bachelor of Informatics (Specializing in Artificial Intelligence) | University of Ciputra Makassar **2022 -2026**

- **GPA:** 3.87 / 4.00
- **Relevant Courses:** Machine Learning, Big Data, Computer Vision, Natural Language Processing, Database Systems, Web & Mobile App Development.

EXPERIENCE

Public Relations Coordinator **2024 - 2025**

Google Developer Student Clubs (GDSC) UC Makassar

- Led internal and external communication strategies to enhance community visibility and developer engagement across campus tech events.
- Drafted formal documentations including comprehensive event proposals, official invitations, and corporate email correspondence.
- Maintained strategic partnerships with external stakeholders and supervised social media content workflows to ensure cohesive branding.

Treasurer **2023 - 2024**

Informatics Student Union UC Makassar

- Managed and audited the overall financial lifecycle, expenditures, and revenues of the student union organization.
- Engineered detailed spreadsheet models using automated data formulas to track budget allocation, cash reserves, and financial balances.
- Prepared and presented structured financial statements to the executive board to ensure full transparency and budget compliance.

Secretary **2023 - 2024**

Orientation Week Committee UC Makassar

- Organized critical administrative documentation, including activity proposals, attendance records, and high-level meeting minutes for campus representatives.
- Managed centralized physical and digital file systems to facilitate seamless accessibility and information flow among committee members.
- Handled internal and external communications, scheduled cross-functional operations, and drafted post-event accountability reports.

ACHIEVEMENTS

Grant Recipient – Program Pembinaan Mahasiswa Wirausaha (P2MW) **2023**

Kemendikbudristek

- Co-founded a tech-driven 3D printing business and successfully secured national funding from the Indonesian Ministry of Education (Kemendikbudristek).
- Spearheaded technical proposal drafting, financial forecasting, and milestones reporting, demonstrating strong entrepreneurial and project management skills.

National Finalist – Lomba Karya Cipta Teknologi (AIoT Competition) **2023**

Universitas Udayana, Bali

- Selected as a finalist among university teams for designing an AI-IoT automated parking gate utilizing YOLOv4 and EasyOCR.
- Presented the automated computer vision solution and technical framework to a panel of academic and industry experts.
